

Inserter assembly is equipped with scratch resistant ABS plastic guards. Also features high impact scratch resistant transparent plastic sliding doors for easy access for maintenance and includes CAT3 magnetic safety interlock switch.

Hopper access door protected by CAT 3 magnetic coded interlock switch and dual key entry system.

Serrated Knife with deep graduated serrations and a 45 degree rake angle for smooth efficient cuts. This knife fully retracts out of the charging box so material can fall without knife edge interference.

New energy efficient hydraulic power unit featuring flooded inlet pressure compensated piston pumps for fast cycle times, noise reducing isolation mounts and simplified valving for years of reliable service.

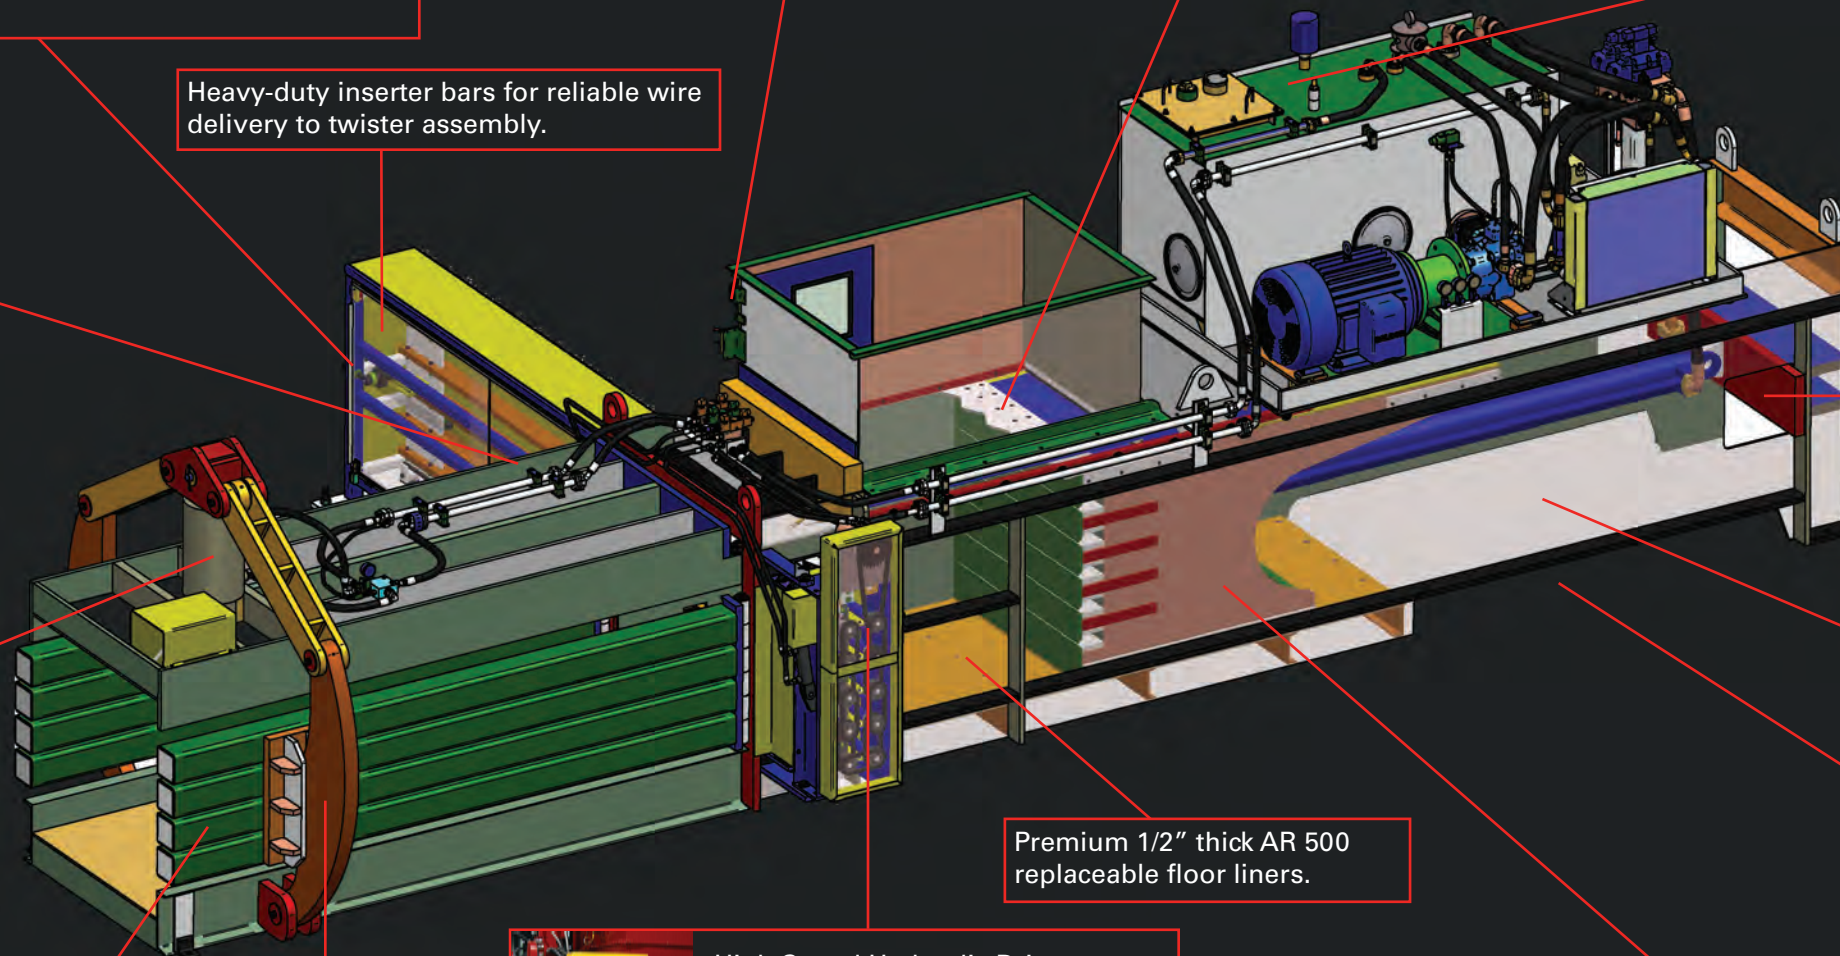

10" color, touch screen control panel with process and production monitoring screens.

Heavy-duty inserter bars for reliable wire delivery to twister assembly.

Heavy duty tension cylinder featuring a self aligning rear clevis. Bale retention system pressure can be adjusted and programmed for each material selection.

Heavy Duty 6" x 6" x 3/8" wall square tubing with reinforcing for increased strength. Newly designed hinged retention chamber requires no mid tension cylinders or devices.

Premium 1/2" thick AR 500 replaceable floor liners.

Cylinder Support is incorporated into the baler side structure thus reducing shear forces across welds.

Solid one piece side plates with reinforced supports. Provides superior strength over structural shapes construction.

High Speed Hydraulic Drive delivers up to 10 second faster cycle times.

High Impact Scratch Resistant Transparent Hinged Door allows for excellent visibility and easy access for maintenance. Includes CAT 3 magnetic safety interlock switches.

High Performance self lubricating Platen wear liners provide outstanding abrasion and wear resistance.

The open design allows for the material to be diverted to the floor for easy clean up. No panels to remove for access.

Single Bale Retention unit equipped with reinforced side arm guides and a one piece bottom trunion tie bar assembly for superior strength.

**We can fit a lot of material
in a small space...
It is our version
of miniaturization**

Harris

The HP series incorporates the latest structural enhancements for added strength and reliability. As a recognized leader, **Harris** always strives to produce the most reliable, highest quality machines to give our customers superior value for their investment. At Harris we understand that the value of the investment is measured on how long the machine performs as designed, not how little it cost initially.

HP Series

Harris, the recognized leader in baling technology introduces its new **HIGH PERFORMANCE HP** Series horizontal balers featuring:

- Energy efficient hydraulics
- Superior structure for durability
- Simplicity for ease of maintenance
- Higher throughputs and densities
- Easy to use controls with multiple program capability
- Enhanced safety features
- Unmatched after sales support through our distributor network
